Professional Summary

A Software Development Engineer (SDE) designs, builds, tests, and maintains software systems. They write clean, efficient code and collaborate with teams to develop scalable and reliable software solutions. SDES use their knowledge of programming languages, algorithms, and software design to solve technical problems. Aspiring Civil Engineer currently pursuing a B.Tech in Civil Engineering, passionate about infrastructure development and sustainable design. Dedicated to leveraging technical skills, software proficiency, and practical field knowledge to contribute effectively to impactful civil projects in a reputed organisation.

Professional Experience

Industrial Automation developer, *Research and Development Engineer* 08/2025 – Present
pune

- Developed and deployed a new SCADA system for a critical production line, reducing manual intervention by 40% and improving overall equipment effectiveness (OEE) by 12%.
- Engineered reusable PLC code modules (Structured Text) that standardized control logic across 5+ different machine types, decreasing development time by 25% per project.
- Integrated proprietary industrial hardware with an enterprise MES using OPC UA, enabling real-time data collection and facilitating predictive maintenance capabilities.
- Led the full software lifecycle, from conceptual design to on-site commissioning, for a multi-axis robotic handling system, achieving a 99.9% uptime in the first year of operation.

CTO & Lead Developer, *Liftuplabs LLP.* 01/2025 – Present
Pune

- Lead technology strategy, software architecture, and product development.
- Design and develop scalable web applications, ERP systems, and AI-powered solutions.
- Manage full-stack development, REST APIs, databases, and cloud deployments.
- Lead the engineering team, conduct code reviews, and mentor developers.
- Implement DevOps practices using Git, Docker, Nginx, Cloudflare, PM2, and CI/CD.
- Collaborate with stakeholders to deliver secure, scalable, and innovative technology solutions.

Software developer engineer, *Bluestock Fintech* 01/2025 – 07/2025
pune

- I wanted to develop software that would contain stock market and related class information and create charts for trading.
- system manages large number of Clint details, does activites like creating, updating, modification, deletion of customer records
- technologies used: PYTHON (Django), javascript
- Database: SQLlite

Education

B.Tech in computer science and Engineering, 12/2022 – Present
Matoshri Pratishthan Group of Institutions (School of Engineering), Nanded
- Graduation Year: 2026
- current CGPA: 7.11/10.0

12th HSC, *Bharat vidyalaya, Hinganghat* 08/2021 – 05/2022
Percentage: 53%

Skills

- Machine Learning
- Deep Learning
- Computer Vision
- Communication & collaboration
- Problem-Solving & critical thinking
- Generative AI
- Cloud & Deployment
- Software Development & Tools
- Data structures and Algorithms
- Artificial Intelligence

Languages

- Python
- C++
- C
- SQL
- HTML
- CSS
- TypeScript
- JavaScript
- React
- Node.js
- Next.js
- Express.js

Certificates

OPSWAT Introduction to Critical Infrastructure Protection (ICIP)
The OPSWAT ICIP course by OPSWAT teaches the basics of protecting critical infrastructure (like power, healthcare, and finance) from cyber threats. It covers attack types, security strategies, data protection, and modern approaches like Zero Trust, with a focus on preventing threats before they happen.

Prerad cybersecurity 3-month training
The training covered essential aspects like network security, risk management, encryption, threat detection, and incident response, providing a robust foundation in cybersecurity. Such training is crucial in today's digital landscape to combat evolving cyber threats effectively.

Interests

Languages
English, Hindi, Marathi.

Awards/Activities
- international Tech Innovation (techfest IIT Bombay) (202),
- National Tech innovation pune (2025)

Trekking

Riding

Explore New Things And AI in Now Days
The current digital landscape is defined by the transformative power of Artificial Intelligence (AI), which is driving innovation across industries, accelerating research, and creating highly personalized online experiences.

Projects

Student Identity System, *Identity System* 08/2024 – 01/2025

- Built a system with the main goal to automate the process carried out by the organization with improved performance to show live student ID proof records.
- System manages large number of student details, performs activities like creating, updating, modification, and deletion of student records.
- Technologies used: HTML, CSS, JS, PYTHON.
- Database: MongoDB

I2School learning system, *learning system* 08/2024 – 12/2024

- This system for today's education is no longer in institution and class rooms and optionbut has become a necessity.
- System manages large number of student details, like name, no, adders, class, result, and all data related to student.
- In this system wecan student dashboard, and teacher's dashboard and ect.
- Technologies used: PYTHON (Django), Javascript.
- Database: SQLlite.
